Claim 1:

Where the drive circuit comprising a light receiving device, an auto power control generating input signal *using a blanking area where the light does not perform the primary scanning, where a current source supplied the light emitting device with a resistor is connected parallel to it, where the amount of current change is constant with the temperature change of the light emitting device in a single primary scanning period, where the changing voltage in accordance with the temperature change of the light emitting device in a single primary scanning period when the current supplied to the light is constant.*

Claim 3:

Where the drive circuit comprising a light receiving device, an auto power control generating input signal *using a blanking area where the light does not perform the primary scanning, where a current source supplied the light emitting device having a coil is connected to the anode of the light and a resistor is connected between the coil and cathode end of the light device, where the amount of current change is constant with the temperature change of the light emitting device in a single primary scanning period, where the changing voltage in accordance with the temperature change of the light emitting device in a single primary scanning period when the current supplied to the light is constant.*

Claim 6:

Where the drive circuit comprising a light receiving device, an auto power control generating input signal *using a blanking area where the light does not perform the primary scanning, where a current source supplied the light emitting device having a resistor connected to the anode of the light device while a coil is connected between the resistor and the cathode of the light emitting device, where the amount of current change is constant with the temperature change of the light emitting device in a single primary scanning period, where the changing voltage in accordance with the temperature change of the light emitting device in a single primary scanning period when the current supplied to the light is constant.*
